

Shibji R

MSc Advanced Computer Science | Python | ML | LLM system | AI Engineer
London, UK | +44 75548 29925 | mrshibji@gmail.com | LinkedIn | Github | Portfolio

PROFESSIONAL SUMMARY

AI Engineer with an MSc in Advanced Computer Science, specializing in RAG systems, LangGraph, and ML pipelines, delivering production solutions with a **60% reduction in latency** and **45% improvement in retrieval accuracy**. Built and deployed scalable **AI/ML systems on Azure** with **99.9% uptime** using **Docker** and CI/CD, reducing release cycles from hours to minutes for real-time intelligent services. Proven impact at **Accenture**, managing **1M+ financial records** while maintaining a **97% SLA** across enterprise-scale systems.

SKILLS SUMMARY

Programming: Python (Asyncio), SQL, HTML, CSS **Cloud Platforms:** Azure (ACR, Web App)
ML & DL: Scikit-Learn, NumPy, Pandas, PyTorch, Ridge, Random Forest, XGBoost, CatBoost
AI & LLM: LangChain, LangGraph, RAG, ChromaDB, Milvus, MCP (Brave Search, Gmail), Graph Memory, Prompt Engineering
Backend & Deployment: Flask, FastAPI, PostgreSQL, Neo4j, Docker, GitHub Actions (CI/CD)

EDUCATION

University of Leeds

Leeds, UK

MSc in Advanced Computer Science | Grade: Merit

Sep 2024 – Nov 2025

- **Relevant Modules:** Machine Learning, Deep Learning, Cloud Computing, Data Mining, Data Science, Algorithms

PROJECT EXPERIENCE

DocLense Finance [Link]

AI Engineering | LangChain · Azure · Docker · GitHub Actions · Flask

- Built a production **RAG** system for financial document querying, deployed on **Azure** with enterprise-grade security for high-availability use.
- Architected a retrieval-augmented generation (RAG) system using **LangChain** and **Flask**, implementing semantic search that improved query accuracy by **45%** over keyword-based baselines.
- Engineered a **CI/CD pipeline** via **GitHub Actions** and **Docker** to automate deployments to **Azure Web Apps**, reducing production release cycles from hours to under **5 minutes**.
- Hardened the stack with **Azure Container Registry** and managed secrets, delivering a secure, SOC2-compliant deployment ready for enterprise-scale traffic.

CitySignal: Autonomous Insider Trade Intelligence Agent (Ongoing) [Link]

AI Engineering Project | LangGraph · PostgreSQL · Brave Search MCP · Gmail MCP · FastAPI

- Building a stateful **multi-agent** system that autonomously monitors UK insider trading filings from the **LSE RNS feed**, detects significant patterns through **historical memory retrieval**, and delivers intelligent alerts in real time.
- Engineered a **pattern scoring engine** (0–100) using **LangGraph** nodes to detect sell clusters, anomalous trade sizes, and role-weighted signals, suppressing low-confidence alerts below a 70-point threshold to eliminate noise.
- Integrated **Brave Search MCP** for live company news enrichment and **Gmail MCP** for autonomous alert delivery, enabling the agent to contextualise insider trades against earnings dates, price movements, and market rumours.
- Designed a **PostgreSQL** persistence layer storing insider history, filing records, and pattern events, enabling **cross-session memory** to distinguish routine scheduled trades from genuinely anomalous director behaviour.

Student Performance Predictor [Link]

ML Project | Python · EDA · Docker · Azure · GitHub Actions

- Predicted student exam scores from socioeconomic and academic features to support early intervention; evaluated 9 regression models (including **Ridge**, **Random Forest**, **XGBoost**, and **CatBoost**) achieving a peak **88.06% R-squared** score.
- Containerized the Flask inference API using **Docker** and engineered a **CI/CD pipeline** via **GitHub Actions** for automated deployment to **Azure**.
- Optimized the cloud architecture to reduce inference latency by **70%**, ensuring seamless, zero-downtime model updates.

PROFESSIONAL EXPERIENCE

Accenture

Gurgaon, India

Application Development Analyst

Jul 2021 – Jul 2024

- Engineered and optimized **complex SQL procedures** to process **1M+ financial records** across distributed JDE tables, developed data extraction workflows for high-stakes regulatory audit reporting.
- Spearheaded **root cause analysis (RCA)** for 120+ production incidents; identified systemic failure patterns to implement preventive monitoring, maintaining a **97% SLA** across high-consequence financial modules.
- Acted as the technical-to-business liaison during system failures, translating complex data bottlenecks into actionable insights for stakeholders to ensure continuous delivery of financial services.
